

# B2 Notes Cell Properties

Note Title

29/10/2013

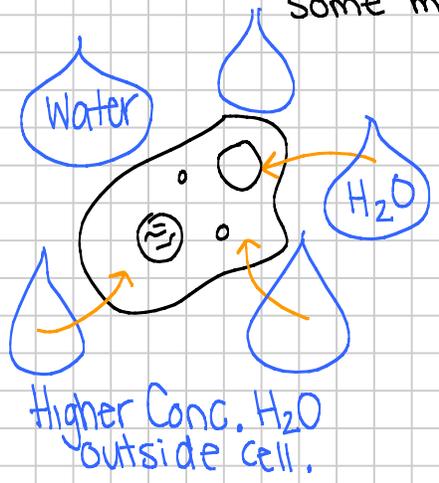

Diffusion: movement of particles from an area of higher concentration to an area of lower concentration

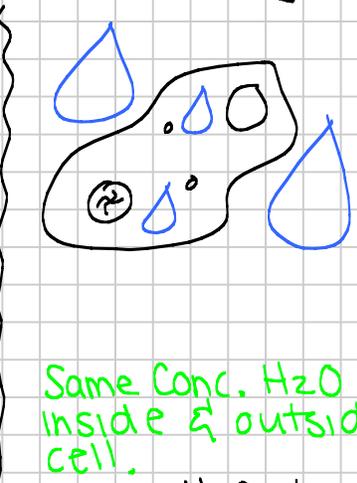

Concentration: refers to the amount of substance in a given space.

Osmosis: the diffusion of WATER<sup>particles</sup> through a selectively permeable membrane

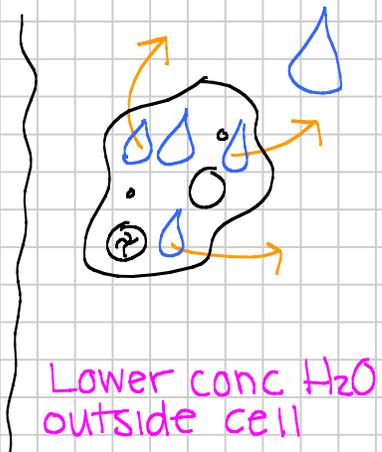

★ cell membranes are selectively (they choose) permeable (stuff can pass through): they let some materials through, but keep others out

causes H<sub>2</sub>O move into cell, causing cell size to grow

causes H<sub>2</sub>O to go back & forth, cell size stays same

causes H<sub>2</sub>O to go outside cell, cell size will shrink
